***Reasons for Allowance***

The following is an examiner's statement of reasons for allowance:

The prior art does not disclose or adequately teach the claimed fluidized bed reactor comprising a first group of filter cartridges having a pore size configured to retain dust particles in the reactor and a second group of filter cartridges having a pore size configured to permit the discharge of dust particles from the reactor, wherein the first and second groups of filter cartridges, respectively, communicate with separate chambers formed in a dome space of the reactor, the first and second groups of filter cartridges dipping into the upper region of a fluidized bed of catalyst granules contained in the reactor. In addition, the prior art does not disclose or adequately teach the claimed method for removing dust particles resulting from the abrasion of catalyst granules during the oxychlorination of ethylene in a fluidized bed reactor, wherein the method comprises the steps of filtering out dust particles from the reaction gas mixture using a first group of sintered metal filter cartridges configured to retain dust particles in the reactor, and filtering out dust particles from the reaction gas mixture using a second group of sintered metal filter cartridges that are configured to permit the discharge of a predetermined content of dust particles of a size smaller than a predetermined particle size from the reactor, wherein the first and second groups of sintered metal filter cartridges, respectively, communicate with separate dome spaces of the fluidized bed reactor.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
